

Broadband For Your Business Success

WELCOME TO THE CITY OF MONROE

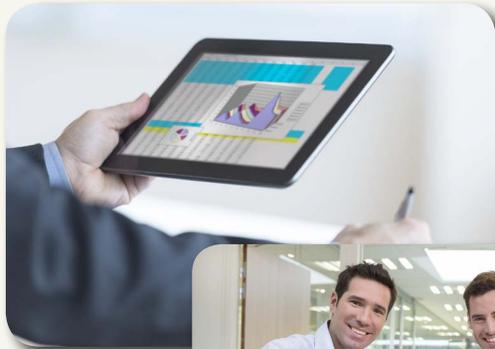

“ Broadband availability is essential to making the City of Monroe a leader in the innovation economy. It is our goal to increase access to broadband which is an essential tool for economic development. We realize the importance of broadband to our current business and residential community and recognize the incentive it provides for those looking to locate here.”

-Matthew Chancey, City Administrator-City of Monroe

Nestled in the Alcovy River basin between the urban sprawl of Atlanta and classic Athens, Monroe offers the best of both worlds. Our rich history draws visitors to Monroe; our small town atmosphere, engaging cultural life, and high tech capabilities entice them to stay. Monroe’s future is exemplified by intermingling these historic areas with planned residential growth and high-tech industries supported by a reliable and secure fiber optic network.

Our Fiber Network

IP@monroega.gov • 770-266-5333

Monroe Fiber Is Part Of The City Of Monroe Utility Department.

We are visionary in offering a better broadband to meet your business needs. We built a fiber network to provide local businesses with the data speeds necessary for their business internet and data requirements. Monroe Fiber provides a flexible network that enables you to grow and to provide the reliable service to meet your demands 24/7.

“The fiber and connectivity services provided by the City of Monroe allows us to operate all of our hospital functions, along with all of our off-campus locations. Through the enhanced connectivity, even our furthest physician office, over 20 miles away, is connected as if they are in the same building.”

- Ed Stanley, Director of Information Systems, Clearview Regional Medical Center

Monroe Fiber offers Business-Class High Speed Internet with download and upload speeds of up to 1 Gbps. We offer fiber based high speed data connectivity to upload or download large files, connect remote offices, utilize cloud services or manage large data transfer. We offer a scalable Internet solution that assist you in growing your business. Monroe Fiber also has the flexibility and creativity to offer unique services utilizing legacy hardware.

Our network is fiber based with diverse route connectivity to the major internet hub in Atlanta (56 Marietta Street). We have taken steps to ensure you have the connectivity when you need it and to maximize your up time.

The World Of Technology Continues To Move Forward At An Increasing Pace. The number of products and innovations that have happened in the last few years is simply staggering. More and more companies are looking to create cutting-edge products or utilize cutting edge applications to improve their bottom line through more effective service delivery. Our society is changing, data access is becoming critical for our everyday life. However, to accomplish this a community must have a fiber based infrastructure to meet the growing needs of the business community.

APPLICATIONS REQUIRING A FIBER BASED NETWORK:

- Large data file transfers for back-up storage and security reasons
- Utilization of Cloud services for cost effective business needs
- Video security storage
- Medical image transferring at rapid speeds
- Engineering documents for large data transfer
- Educational requirements to insure learning needs are met
- Wireless - Fiber to the Tower for high capacity voice/data usage
- New applications for the “Internet of Things”

POWERFUL BENEFITS

- Simple, manageable and scalable high-capacity bandwidth
- Reliable access to the internet, intranet and extranet sites
- Layer 2 transport
- Speeds from 10 Mbps to 1 Gps
- Symmetrical upload and download speeds – quickly send and receive large data files
- Ability to drive applications such as video conferencing, VoIP, web-hosting services or cloud applications
- Flexibility to choose the optimum bandwidth for your location or locations, with room to grow as your business grows
- Useful web-based monitoring, management and reporting tools

GUARANTEED RELIABILITY

- A redundant, reliable IP network infrastructure ensures availability and service quality
- Network design maximizes redundancy with no single IP point of failure
- Supported by our fiber-optic backbone, dynamic architecture and 24/7 monitoring by our Network Operations Center
- SLA (Service Level Agreement) ensure service is always-on and ready to meet your business requirements
